

WJ POWER

Jan-Willem Storm
CEO

A Word of Welcome

Maintaining proven quality and making it fit for the future – this is the philosophy WJ POWER GmbH started with in August 2018.

An exciting beginning with promising perspectives: Taking over the HMG gas engine production provided the initial spark. As a reliable partner for our customers, we continue to provide first-class service and spare parts supply for HMG engines, and are also happy to answer any questions you may have about our products and services at any time. From the HMG production we have taken over years of experience in the development of reliable and efficient engines. In addition, as part of the STORM-Group, we have access to knowledge and expertise from over 85 years of engine service.

However, we would not be part of the STORM-Group if we did not envision the future with enthusiasm and motivation. Qualified employees, innovative ideas and access to extensive know-how within our network enables us to constantly optimize our product range and adapt it to customers' needs.

First and foremost, we obtain our POWER primarily from one source – your satisfaction!

We are looking forward to a good cooperation with you!

Yours sincerely

A handwritten signature in black ink that reads "Jan-Willem Storm". The signature is written in a cursive, slightly stylized font.

Jan-Willem Storm

Young, dynamic, innovative – while backed up by infrastructure, knowledge and over 85 years of engine repair experience of the STORM-Group: a perfect mix!

For our customers, this ensures proven quality and dynamic service all at once:

- We adapt flexibly to your individual needs
- Your personal contact person is always accessible
- After purchase, we assist you by supplying maintenance kits, spare or add-on parts
- Our cylinder head exchange program provides support in achieving high system availability

WJ POWER gives top priority to quality and safety thinking in all areas of the company. Our official certifications by external institutes guarantee this at the highest level.

Highest efficiency, excellent quality and state-of-the-art technology – this is what our basic gas engines for decentralized power generation in the power range from 26 to 100 kW stand for.

In natural gas operation, but also in the use of biogas, wood and special gases, they convince with high efficiency, low emissions and reliable performance. Their long service life combined with low wear, reduced oil consumption and wide-spaced maintenance intervals contribute to low total operating costs.

All this makes WJ POWER your competent partner for gas engine development, production and service.

Innovation meets Tradition

Product Development

The development of our engines is in the hands of qualified specialists with access to a wide range of know-how: Not only has WJ POWER taken over the knowledge gained from several years of HMG engine development, we also benefit from decades of experience in engine service and overhaul as part of our affiliation to the STORM-Group.

Furthermore, impulses from current scientific research are also incorporated into our products. A close cooperation with the University of Applied Sciences Karlsruhe provides innovative technological knowledge which we implement directly in customer solutions.

Manufacturing

An engine is a high-quality and complex system consisting of state-of-the-art technologies and components. Innovative and quality-conscious, our experienced professionals use their comprehensive production knowledge to manufacture engines of outstanding quality and value.

As part of the STORM-Group, we have access to a large network of partners and can use the entire infrastructure.

A major benefit for our customers: with flexible production, high capacities and a sophisticated workflow we adapt to their specific needs.

Standardised production procedures with test steps that are defined in detail and documented in a sustainable manner guarantee consistently high quality.

We also carry out repair work flexibly, reliably and promptly.

To ensure customer-oriented service, WJ POWER gives highest priority to quality and safety thinking in all areas of the company. Process-oriented and documented workflows, both in production and in spare parts sourcing, ensure this.

Compliance with our standards is regularly checked by external institutes. Our certifications according to ISO 9001 and ISO 14001 guarantee quality at the highest level.

Quality & Certifications

Spare Parts, Maintenance Kits & Add-on Parts

High-quality spare parts, promptly available and with short delivery times – WJ POWER offers customised parts supply after purchase. Maintenance kits, precisely tailored to the various maintenance stages, are designed to make necessary work easier for you. In addition, you can obtain add-on parts from various suppliers such as ignition systems, speed

governors, gas mixers and others. Due to our joint demand potential from the STORM-Group, our customers benefit from attractive conditions as well.

Our cylinder head exchange program supports you in achieving high system availability.
